

# THE ARTIFICIAL INTELLIGENCE

ACTIVITY BOOK

# CONTENTS

This interactive activity book encourages young learners like you to understand what is Artificial Intelligence (AI), and see how it can help you in your everyday life. We hope you will have fun learning about AI with Rolly and friends through the entertaining comics and fun activities.

Before you begin your intriguing journey, fill in a short survey to see how well you know about AI!

About AI**

# THE AI-OPENER

ROLLY

Enthusiastic and passionate about AI, Rolly is a robot prototype from Mum's workplace. He helps Mavie on her journey to learn about AI.

MAVIE

New to the world of AI, Mavie is enlightened with Rolly's help. As their journey progresses, Mavie learns about AI, and understands how it works.

NATHAN

Classmate and close friend of Mavie, Nathan is a reserved individual. Meeting Rolly, he is able to learn more about what AI has to offer.

MUM

Her work revolves around AI and robotics, and explore how they can be used to make the world a better place. Together with Rolly, they teach Mavie and Nathan about AI.

DAD

He balances the energy within the household, and uses AI to help him in his daily lives.

MS NORA

A teacher who promotes learning about AI through fun and interactive ways.

Hi Mum, I'm hungry. Can we go for lunch?

It's done!

Oh, what is that!

This is a prototype robot from work! We named him Rolly.

What can he do? Can I play with him?

Well, you can't play with him just yet. But, ask him anything and he'll be able to answer you most of the time! He's smart!

Hi Rolly! I'm Mavie. Where can my family and I go for lunch today?

Hello Mavie, nice to meet you! Within this area, there are some fast food restaurants, coffee shops and restaurants.

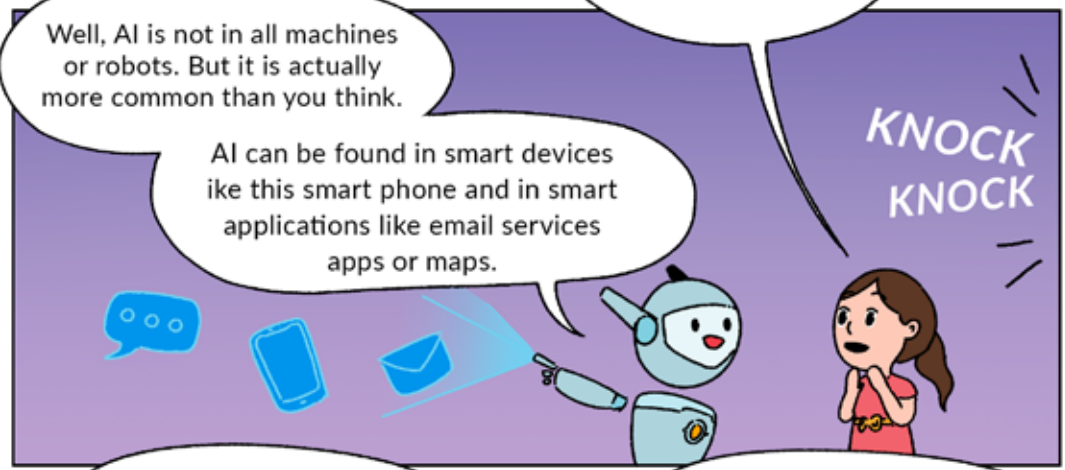

What do you feel like eating today?

Mum! He talks?!

Yes! Rolly is a robot with Artificial Intelligence, or AI. AI is about trying to get a robot or a machine to think like a human.

Oh wow! You mean all machines and robots have AI in them?

Well, AI is not in all machines or robots. But it is actually more common than you think.

AI can be found in smart devices like this smart phone and in smart applications like email services apps or maps.

KNOCK KNOCK

Rolly, is there even more I can learn about AI?

Can you teach me?

Ahem!

I see you brought home a new friend from work! Can he decide where we can go for lunch, because I have no clue!

# WHAT IS

# AI?

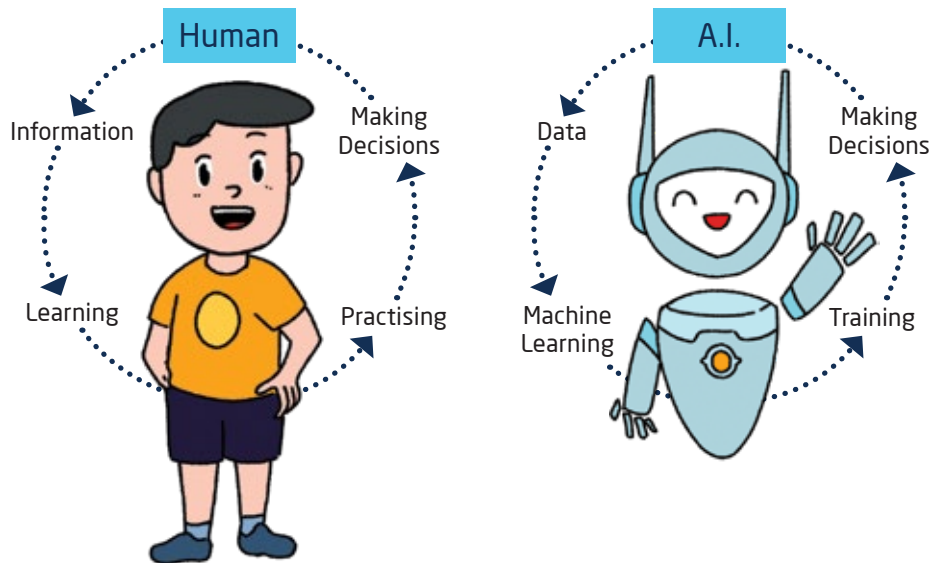

Artificial Intelligence (AI) is about trying to teach machines and computers to be smart.

Like a human brain, AI learns from information, also known as data. With training and learning, AI makes machines and computers smart and can make recommendations or decisions to help humans.

## A.I. IN A NUTSHELL

### What does AI do?

AI helps humans search for information more efficiently, brings convenience into our daily lives and increases our productivity levels by helping us do simple tasks.

#### TRY IT OUT!

Discover how AI can help us by trying these commands on your smart phone. Remember to enable the function in your phone before you try!

#### If you are using an iOS phone

Say "Hey Siri", followed by:

- "Set an alarm for 7am on weekdays"
- "What's the weather today?"
- "Send a message to mum saying I'll be late for dinner."

#### If you are using an Android phone

Say "Okay google", followed by:

- "Take a selfie"
- "Remind me to do my math homework at 3pm"
- "Set a timer for 5 minutes"

## AI is in SMART DEVICES

AI can be found in smart devices like Digital Personal Assistants such as Google Home, Alexa and in smart phones.

AI is also in self-driving vehicles to predict dangers and ensures that passengers and pedestrians remain safe on the road. AI helps these vehicles to:

- Recognise the roads and drive only on them
- Navigate from point A to B
- Identify the speed limits of roads
- Tell people and animals apart

## AI is also in SMART APPLICATIONS OR SERVICES

Video platforms like YouTube never fail to recommend something you will love to watch! They use AI to understand what you may like, based on your viewing history such as the videos you have watched.

With AI, repetitive tasks such as replying emails will be more efficient, as AI predicts and provides suggestions so users can write messages with less words. AI also helps with identifying and filtering of spam emails, so your email account will almost always be spam-free.

# LET'S PLUG IN!

## EXERCISE #1

1

AI is about trying to get a human to think like a robot.

True

False

2

AI is like a human brain, which processes information as data.

True

False

3

AI helps humans do repetitive tasks, and it could be more accurate and efficient as compared to humans.

True

False

4

AI is found in all vehicles.

True

False

5

AI is found in Apps such as Gmail and YouTube.

True

False

Answers:  
1. (False) - AI is about teaching machines and robots to be smart.  
2. (True) - AI processes information and makes decisions based on what it has learnt.  
3. (True) - The purpose of AI is to bring convenience into our lives so we can be more efficient in what we do.  
4. (False) - AI is found in self-driving vehicles to ensure that both the passengers and pedestrians are safe.  
5. (True) - AI is found in commonly used apps such as YouTube and Gmail and even social media platforms too.

I haven't even finished drawing the guitar yet and it can already guess what it is! How does it do that?

It's AI again Mavie! It recognised your drawing by looking at its data of millions of drawings done by others.

Oh i know, It's a guitar!

AI is made through coding. Codes are instructions for machines and robots like me.

I don't understand.

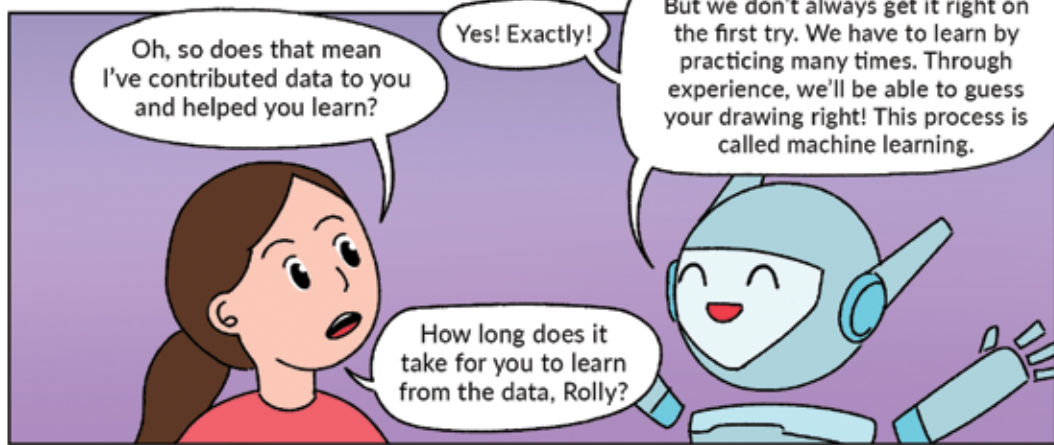

Oh i know, It's a guitar!

For us robots and machines, the codes are our lessons and we have to be taught as well! We learn by being fed large amounts of data, just like how humans learn from past experiences.

By drawing a guitar, you are adding to a growing set of guitar drawings contributed by many other people. From these drawings, machines discover patterns about what makes up a guitar, and learn what a guitar looks like!

Oh i know, It's a guitar!

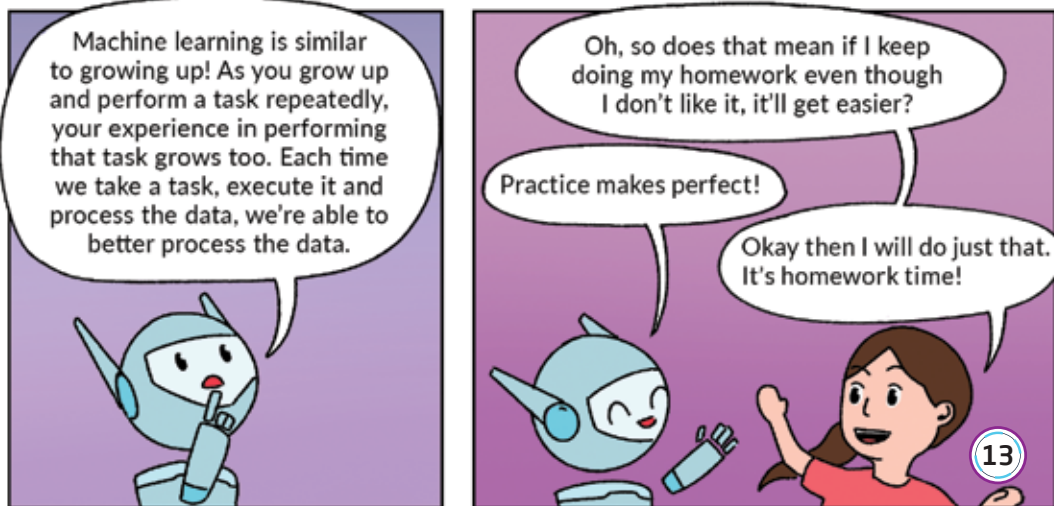

Oh, so does that mean I've contributed data to you and helped you learn?

Yes! Exactly!

But we don't always get it right on the first try. We have to learn by practicing many times. Through experience, we'll be able to guess your drawing right! This process is called machine learning.

How long does it take for you to learn from the data, Rolly?

Oh, so does that mean if I keep doing my homework even though I don't like it, it'll get easier?

Practice makes perfect!

Okay then I will do just that. It's homework time!

# HOW DOES

# AI WORK?

AI is created through the process of writing codes; which are the instructions for machines or robots. Codes are also known as programming languages.

To “teach” the machines or robots, we provide large amount of data to them. Based on the instructions, the machines or robots will then learn to respond to the data.

There are about

**700**

different codes or programming languages in the world!

**ALPHA ZERO**

the game-playing AI created by DeepMind, has beaten the world’s best chess player.

FUN  
FACTS  
about  
AI

# LET'S PLUG IN!

## EXERCISE #2

Learn more about AI through these fun activities!

### Programming Language: WIN A GAME OF TIC TAC TOE

Play a game of Tic Tac Toe with a piece of intelligent paper. Did you realise that the intelligent paper won half of the games and scored a draw for the other half? It did show intelligence after all!

This is an example of a computer program where instructions are to be followed blindly to make computers work. The instructions for the computer program is called programming language.

**ACTIVITY**  
Play a game of Tic Tac Toe

### Dataset Classification: CLASSIFYING CATS AND CUPS

A dataset is a collection of data such as images or specific words that is grouped in a certain way; either by humans or AI.

**ACTIVITY**  
Classifying Cats and Cups

### Growing a Dataset: DOODLE AWAY WITH QUICKDRAW

AI manages to guess what you are doodling by referring to its dataset of millions of drawings done by other people. It gets more accurate as more people contribute to this dataset. Congratulations! You have just contributed your drawings to its dataset.

**ACTIVITY**  
Doodle Away with Quickdraw

### Machine Learning: WINNING THE FLAPPY BIRD GAME

AI learns by practicing many times. It could get it wrong at first. Eventually, it will learn from its experience and get it right. This process is called machine learning.

Watch how AI learns to play Flappy Bird. Notice how it did not know how to play in the beginning, but it managed to ace the game after many rounds of learning and adjusting.

**ACTIVITY**  
Watch the Flappy Bird video

### Computer Vision: SEEING THE WORLD THROUGH THE MACHINE'S "EYES"

Computers and smart phones use a technology called Computer Vision to recognise and understand the world. Computer Vision identifies objects by comparing its database of images and making an intelligent guess on the object.

**ACTIVITY**  
Identifying everyday things with Thing Translator

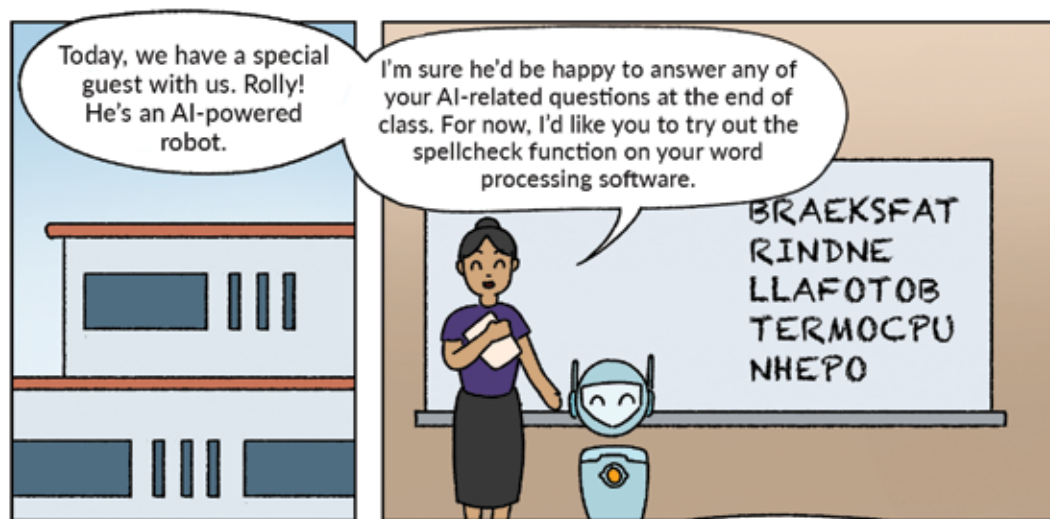

### Natural Language Processing: THE MEANING OF WORDS

Natural Language Processing helps computers to understand the context and accents of words when they are spoken to the computer. This makes it possible for computers to read text, hear speeches, interpret text and even measure sentiment.

**ACTIVITY**  
Translate your speech with Google Translate

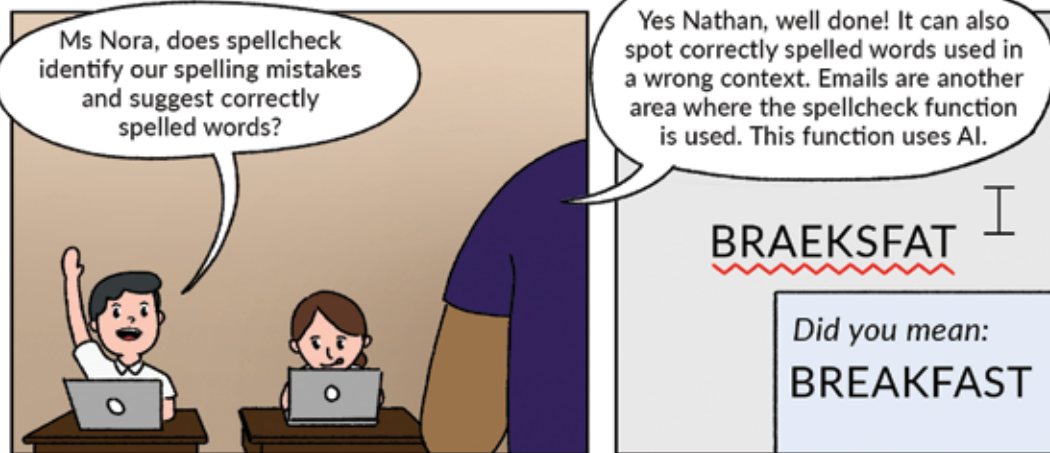

Today, we have a special guest with us. Rolly! He's an AI-powered robot.

I'm sure he'd be happy to answer any of your AI-related questions at the end of class. For now, I'd like you to try out the spellcheck function on your word processing software.

BRAEKSFAT  
RINDNE  
LLAFOTOB  
TERMOCPU  
NHEPO

Ms Nora, does spellcheck identify our spelling mistakes and suggest correctly spelled words?

Yes Nathan, well done! It can also spot correctly spelled words used in a wrong context. Emails are another area where the spellcheck function is used. This function uses AI.

BRAEKSFAT  
BRAEKSFAT  
Did you mean:  
BREAKFAST

After school

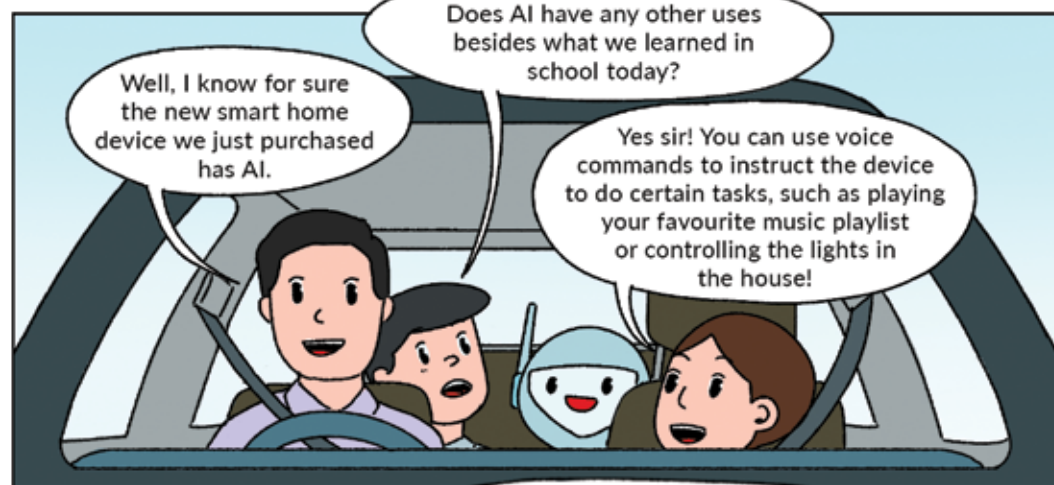

Daddy! Nathan is coming home with us to learn more about AI!

Hi Nathan! I see you all have learnt about AI in school today. Did you notice the many ways AI was used throughout your day at school?

I did!! I recommended Mum to use the Map app to get us to school on time, and Mum even used AI in her phone to check the weather.

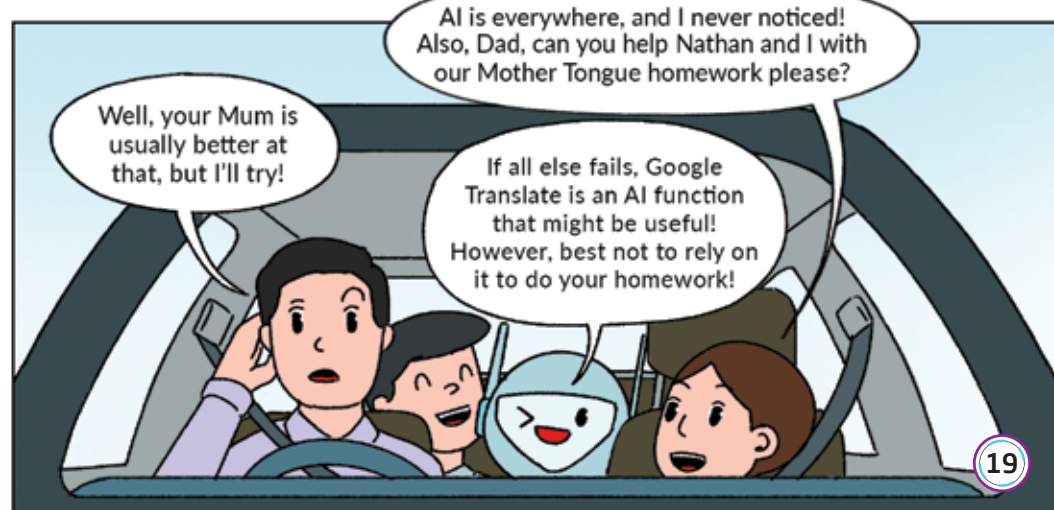

We even had a chance to use the laptops today to explore AI-powered spellcheck. I loved that activity!

Well, I know for sure the new smart home device we just purchased has AI.

Does AI have any other uses besides what we learned in school today?

Yes sir! You can use voice commands to instruct the device to do certain tasks, such as playing your favourite music playlist or controlling the lights in the house!

Well, your Mum is usually better at that, but I'll try!

AI is everywhere, and I never noticed! Also, Dad, can you help Nathan and I with our Mother Tongue homework please?

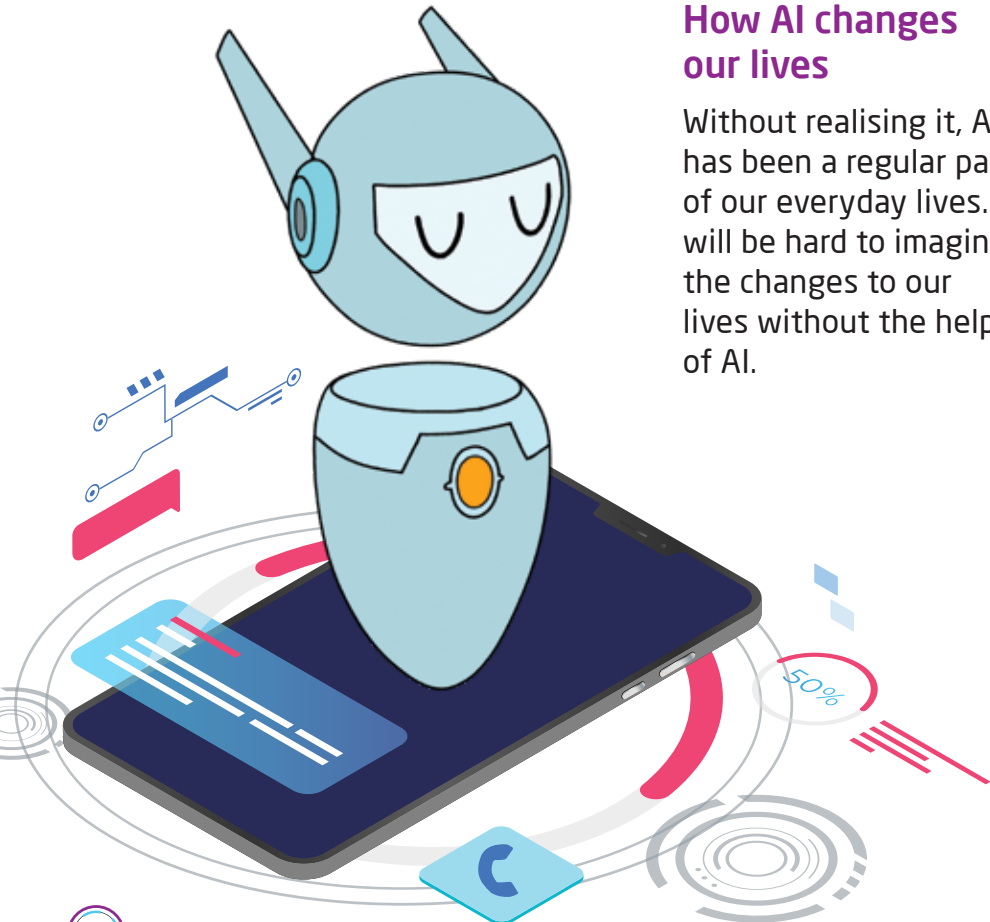

If all else fails, Google Translate is an AI function that might be useful! However, best not to rely on it to do your homework!

# AI IS PRESENT IN OUR EVERYDAY LIVES

## How AI changes our lives

Without realising it, AI has been a regular part of our everyday lives. It will be hard to imagine the changes to our lives without the help of AI.

## AI IN COMMONLY USED DEVICES AND APPS

Check out these AI-powered devices and apps we commonly used in our daily lives.

AI protects our email accounts by blocking emails **IDENTIFIED** as spam, using a spam filter.

The **FACIAL RECOGNITION** feature in smart phones uses AI as a security measure to recognise faces and unlock phones.

AI is in **PREDICTIVE TEXTING** that suggests replies you can use in your messages.

Spellcheck uses AI to help **IDENTIFY** spelling mistakes and suggests correctly spelled words.

Smart home devices such as Google Home or Alexa use **SPEECH RECOGNITION** to recognise the users' voice to activate various functions at home.

Map apps such as Google Maps uses AI to check the traffic conditions and **RECOMMENDS** the best route for you.

Digital Voice Assistants use **SPEECH RECOGNITION** to help our parents and grandparents learn about the current news affairs and the weather without the hassle of typing.

Google Translate uses **COMPUTER VISION** to translate road signs and restaurant menus by pointing your camera at the words you want to translate.

# LET'S PLUG IN!

## EXERCISE #3

Identify which item or service has AI and which one doesn't.

EMAIL

YES NO

SMART TV

YES NO

BICYCLE

YES NO

VISUALISER

YES NO

COMPUTER MOUSE

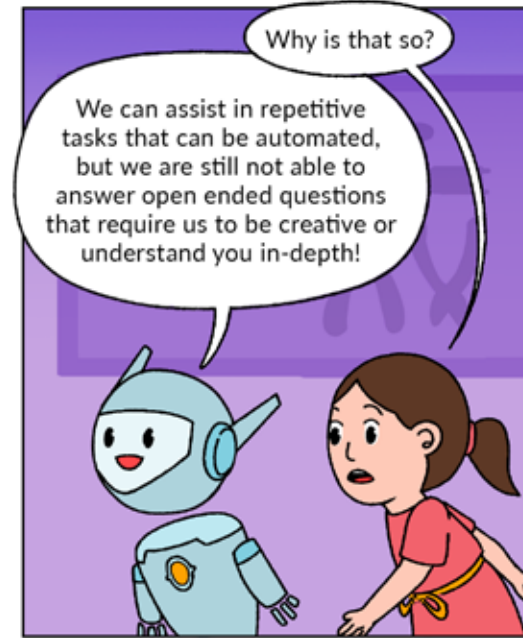

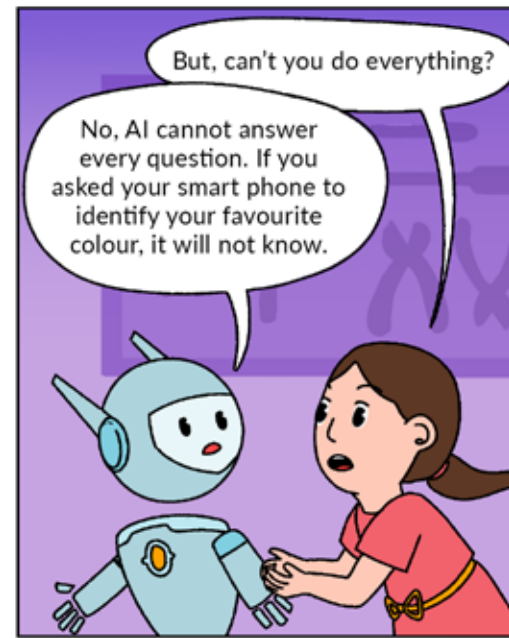

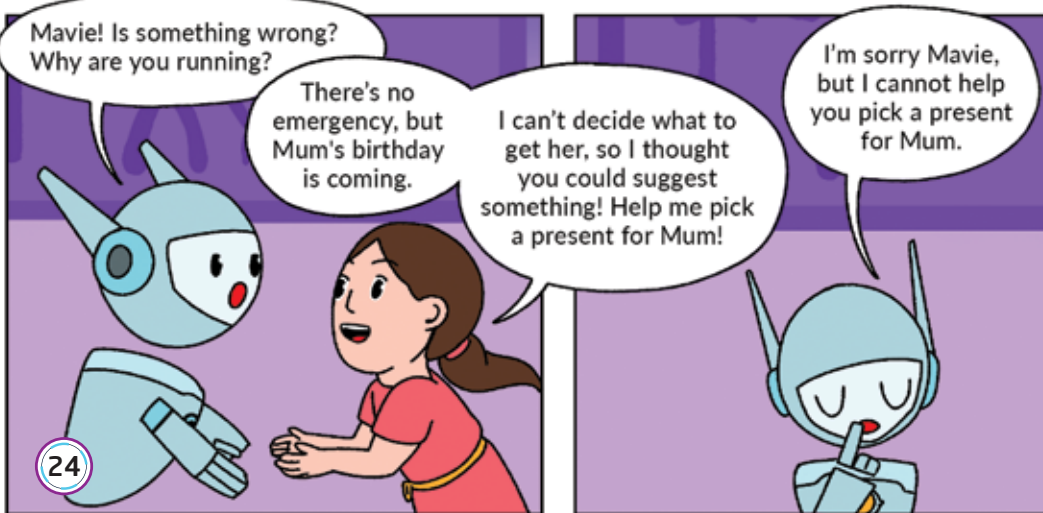

YES NO

INSTAGRAM

YES NO

Answers:  
**Email:** Yes - AI is widely used in emails. An example is the usage of Spam filters to detect unwanted emails, sending them to the junk mail box directly.  
**Smart TV:** Yes - TVs are increasingly being built with voice recognition ability to recognise your voice and answer your requests.  
**Bicycle:** No - It requires humans to ride the bicycle.  
**Visualiser:** No - It only projects images.  
**Computer Mouse:** No - It helps us as a pointing device to move the pointer across the screen.  
**Instagram:** Yes - Social Media platform such as Instagram creates filters that use AI-powered facial recognition function to identify a human face and overlay effects on it.

# DEBUNKING MYTHS OF

# AI

AI has opened doors to endless possibilities, providing us with ease in our daily lives. However, there are certain areas in which AI is used as an aid, rather than a solution.

## Myth: AI CAN DO EVERYTHING

**Fact:** AI is only able to assist in repetitive tasks that can be automated. While AI is getting better at understanding human emotions, there are still many limitations as it cannot engage in critical thinking, being creative or having emotional intelligence like humans. Hence, it may not be able to answer open-ended questions that requires in-depth understanding.

## Myth

AI is smarter than humans. 😨

## Fact

AI can only perform tasks that it is programmed to do. While AI can help us to process information quicker and provide recommendations, there are still many decisions that only humans can make.

## Myth

AI will replace our jobs in the future. 😞

## Fact

With AI's assistance in repetitive tasks, we are able to do more meaningful tasks. Jobs in certain industries such as complex and strategic jobs, creative jobs and empathetic jobs will not be replaced by AI.

## Myth

AI will take over the world. 😞

## Fact

AI supports us by making our lives easier, safer and more fun. It is up to us to make sure that AI helps to make everyone's lives better.

# LET'S PLUG IN!

## EXERCISE #4

### SEE WHAT AI CAN DO

#### ACTIVITY: The Infinite Drum Machine

While AI is unable to create original content, they can assist us in creating content by following a set of instructions.

AI can group different types of sounds together without any description. Explore groups of similar sounds and make beats using the drum sequencer.

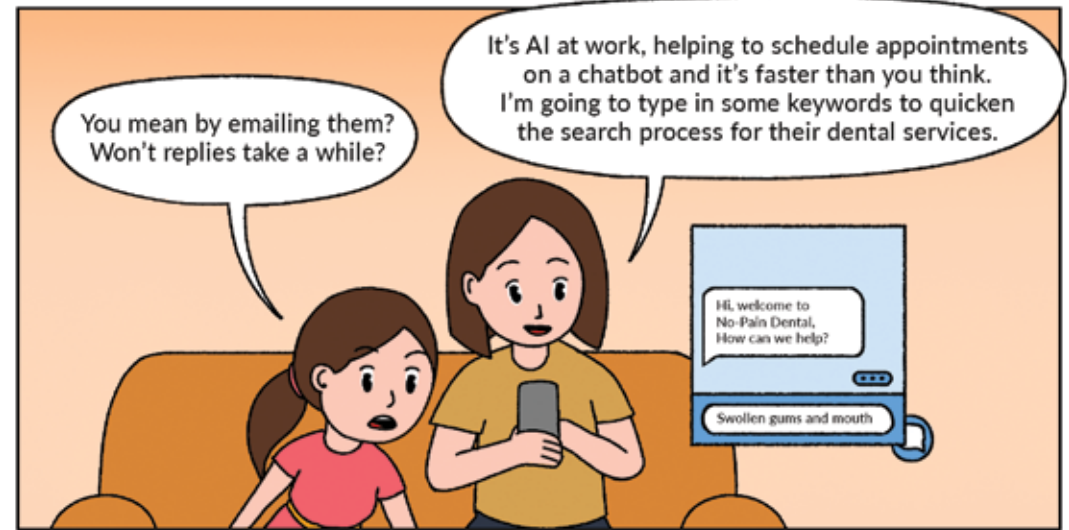

#### ACTIVITY: GoART - AI photo effects

AI can help us turn any photo into an artwork, based on the style of famous artists. Check it out!

## THE DENTAL DEBACLE

It saves you so much time!  
And it almost feels like a  
real conversation.

Chatbots do save you time! They're similar  
to an AI feature called Predictive Text.  
In emails, AI tries to understand typed text  
so AI can suggest words and phrases to  
finish your sentences. If you like the  
suggestion, you simply click on the phrase  
to paste the message.

Thank you for  
your name and you  
gets disconnected.

Where is the nearest branch to your current  
location?  
- Tampines  
- Ponggol  
- Wang  
- East

Tampines

How does AI know what I  
need in a search engine?

In a search engine, AI goes through your  
past searches and data that you've keyed in  
previously such as your locations!

When you begin typing a search  
term, it recalls what you tried to  
find in your previous searches to  
make relevant recommendations  
for you or suggests places that  
are more relatable to you. For  
instance, this dental clinic that is  
a short drive away!

I knew I heard a buzz of information  
all the way from the study room and  
had to be a part of it. A chatbot?  
Well, we do love convenience!

Rolly! Mum just spoke to a chatbot  
to book a dental appointment for  
Dad's swollen gum!

30

?!?!

All these cyberbullying cases.. I'm  
starting to wonder if the Internet is  
actually a blessing or a curse! Ow!

Did you know AI  
can help prevent  
cyber-bullying?

How? It can't  
perceive emotions!

Many codes and  
datasets are being created to  
train these machines to detect  
hate words and abusive speech,  
and spot problematic user  
accounts on social media.  
Hopefully, this will help reduce  
cyber-bullying cases online by  
flagging out users who made  
such mean comments!

While AI can possibly help to reduce  
cyber bullying cases, it is still up to us  
humans to keep our online community a  
safe and friendly place for everyone.

Another new thing for me to  
learn about AI today! Anyway,  
Dad, time for the dentist!

31

# AI AND YOUR DATA

## Does AI know what I want?

Your preferences can be captured as you click through different websites and applications or use AI-powered devices. This preference is then converted into data which is used to recommend similar videos to watch on YouTube or similar type of music to listen on Spotify. It can even remember your search history to help auto-complete your searches and remember your voice for voice-activated devices. This is how AI helps you make your life more convenient and efficient.

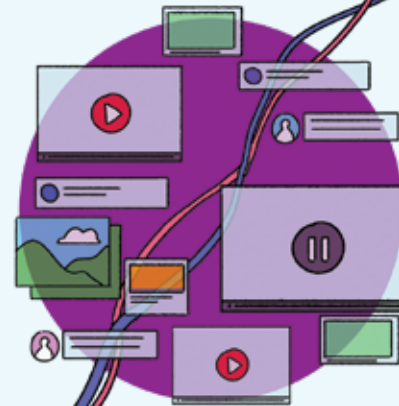

Know what you are sharing, and check if you need these services. You can opt to switch off this tracking function in the websites, applications or devices, if you do not need these services.

By searching for specific recipes online, or looking for specific videos on YouTube, you are inputting data into the system.

As you visit similar websites, AI recalls your previous searches to make relevant recommendations for you or suggests options and links that are more relatable to you.

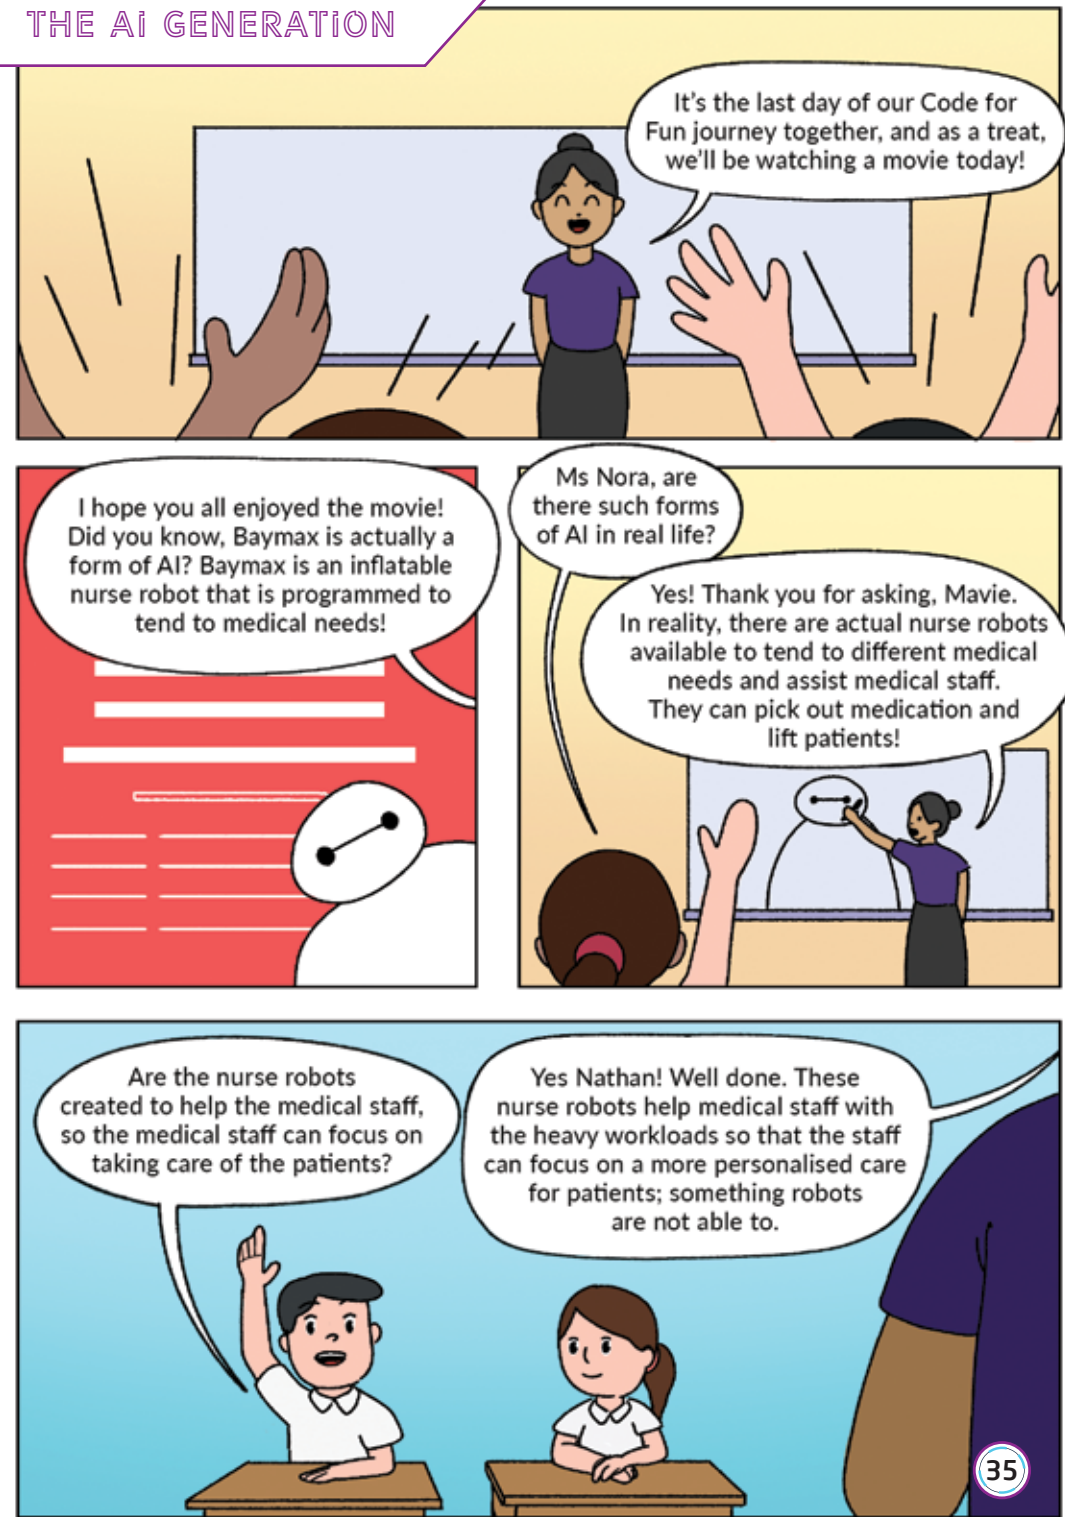

The data acquired from your searches contribute to a customised dataset which AI uses to better understand what you need. This allows them to detect what you might be looking for next time!

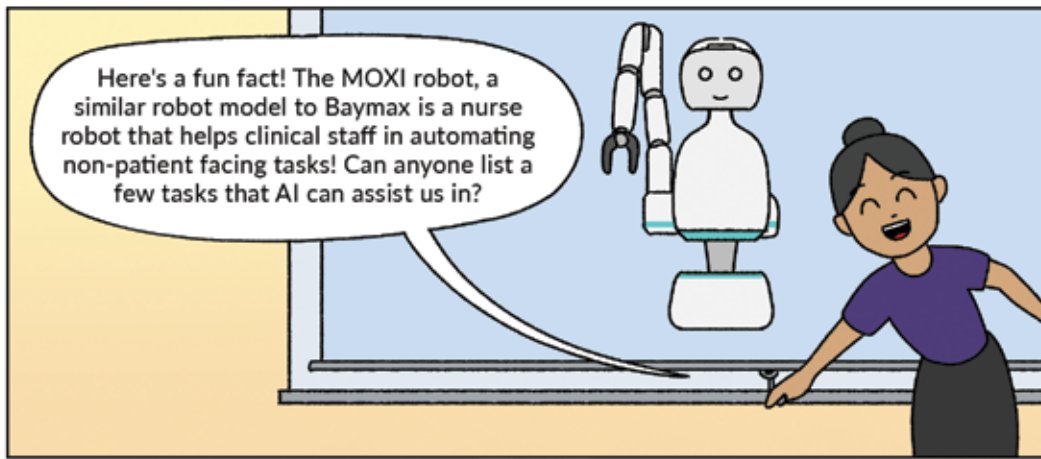

# «LET'S PLUG IN! #5»

How else do you think AI can help us?

Lined writing area for student responses.

Here's a fun fact! The MOXI robot, a similar robot model to Baymax is a nurse robot that helps clinical staff in automating non-patient facing tasks! Can anyone list a few tasks that AI can assist us in?

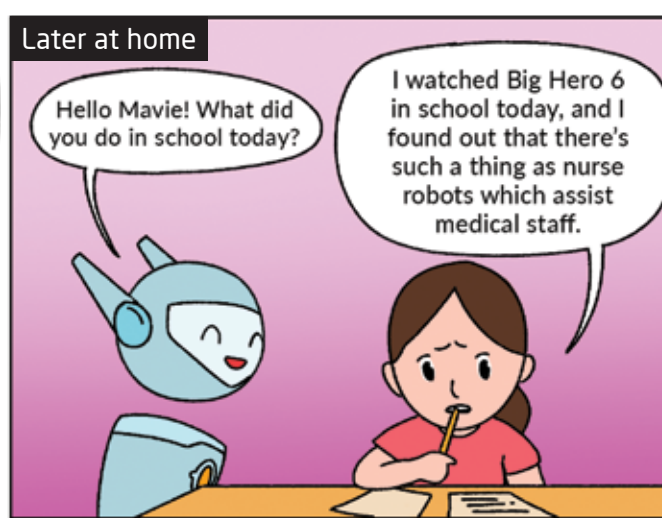

Yes Nathan! Can AI do everything?

AI can help identify cancer cells? Um, it can also help us with spellcheck..?

No, it cannot! AI is not able to perceive emotions or think on its own. AI could not help me pick out a present for my mum without me providing suggestions.

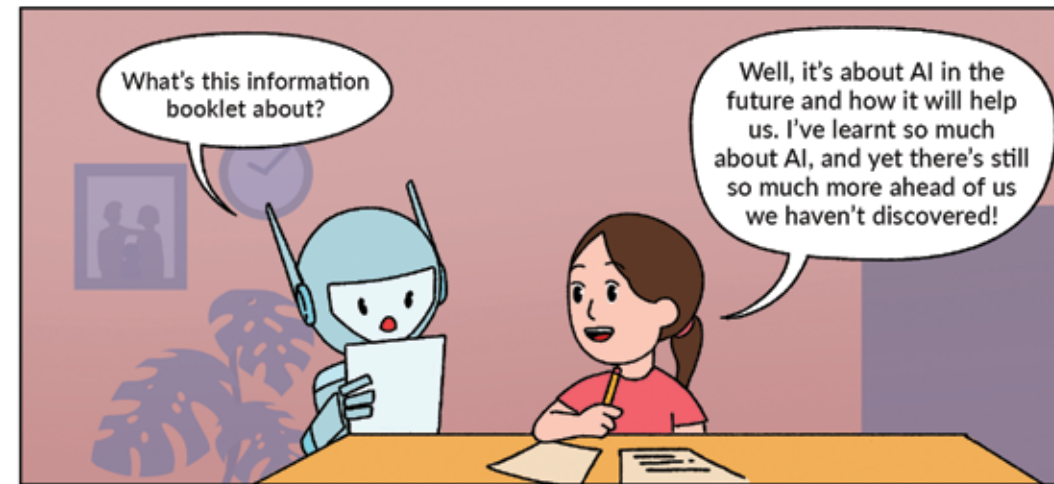

Alright class, we've run out of time, so take these self-reflection worksheets as well as the information booklet on 'AI in the future' as your homework for today. You can hand it in to me in the office!

Later at home

Hello Mavie! What did you do in school today?

I watched Big Hero 6 in school today, and I found out that there's such a thing as nurse robots which assist medical staff.

What's this information booklet about?

Well, it's about AI in the future and how it will help us. I've learnt so much about AI, and yet there's still so much more ahead of us we haven't discovered!

What does AI do in the future?

Look! Here it says, AI could probably predict chronic diseases and even learn how to manage them. Imagine how many lives that will save!

Students like me will have an opportunity at a personalised education too. Teachers like Ms Nora will be able to customise learning for each one of us!

It seems like AI will help the world become a better place! Why do you look so down?

It's just, there are so many things to write, I'm worried there won't be enough space on my worksheet.

# THE FUTURE OF AI

## National AI Strategy

In 2019, the Singapore Government published the National Artificial Intelligence (AI) Strategy, a plan sharing how AI can be used to bring greater convenience, safety and security to Singaporeans in their everyday lives.

Transport and logistics

Smart Cities and Estates

Healthcare

Education

Safety and security

## TRANSPORT AND LOGISTICS

AI can help to better plan transport routes and scheduling for drivers to increase productivity, and reduce waiting time in traffic or during deliveries.

## SMART CITIES AND ESTATES

AI and sensors can be used in neighbourhood facilities, like lifts, to alert on would-be faults before they happen, reducing the inconvenience for residents.

It can also help better understand how residents use various facilities, so that the Government can plan and build better facilities that meet the residents' needs. With an AI-powered chatbot, queries from residents can also be addressed quicker.

## HEALTHCARE

AI can help healthcare professionals in early detection of chronic disease so they can better help their patients, and help doctors to track a patient's recovery progress. With the help of AI, patients can also self-manage and monitor their health conditions.

## EDUCATION

AI can be used to better understand students' response to learning materials and customise a learning pathway for students. An AI-enabled Automated Marking System can assist teachers in marking short answers and essays. Lastly, an AI Learning Companion can support students' development by motivating, engaging them and allowing them to reflect on their learning experiences.

## SAFETY AND SECURITY

AI can help to enhance border security and reduce waiting time by turning immigration clearance into a fully automated system based on iris and facial biometrics, allowing travellers to enjoy a fuss-free experience without the need to present their passports.

What would the **FUTURE** with **AI** look like?
